Cookie Policy

Cookies and similar technologies of the myDewetra portal
Last updated | 31 July 2026

Purpose and scope

This Cookie Policy describes cookies and similar technologies used by the myDewetra portal, available at https://www.mydewetra.org, including the public /landing-pages/ page, the shared authentication system and applications provided under the same domain.

What are cookies and similar technologies?

Cookies are small text files sent by the website visited to the user's device, normally through the browser, where they are stored to enable recognition of the device during subsequent visits.

Cookies may be installed by the portal operator (first-party cookies) or by other parties through resources or services embedded in the portal (third-party cookies). For third-party cookies, information obligations and, where necessary, consent collection are the responsibility of the relevant providers, to whose updated privacy notices the portal refers.

The portal may also use localStorage, sessionStorage, application cache and other technical browser storage, with functions similar to storing technical identifiers, preferences or information necessary for service continuity.

Categories and conditions of use

Depending on their purpose, cookies are divided into technical cookies and profiling cookies. Technical cookies are used for security, authentication, authorisation, session maintenance and the correct operation of applications. Where strictly necessary for the requested service, their use does not require consent pursuant to Art. 122, paragraph 1, of Legislative Decree 196/2003.

Analytics cookies may be treated as technical cookies when used exclusively for statistical purposes, with aggregated data and measures suitable for reducing their identifying power. As of the date of the last documented technical verification, the portal does not use web analytics tools directly implemented by the Controller.

Profiling cookies are used to track browsing activity and create profiles for marketing purposes. The portal does not use first-party or third-party profiling cookies.

Depending on their duration, cookies may be persistent, if they remain stored until their expiry, or session cookies, if they are deleted when the browser is closed.

Similar technologies

- localStorage and sessionStorage: used to store technical information; sessionStorage is normally deleted when the browser is closed.
- Web beacons or pixel images: detection techniques based on loading images contained in web pages.
- Fingerprinting: the portal does not use fingerprinting techniques.

Which cookies does the myDewetra portal use?

The portal uses technical cookies and localStorage for authentication, security, authorisation and session continuity. Cookies set by external providers may vary depending on the service selected and the configurations of the relevant providers.

Name	Scope	Deadline
csrftoken	Technical security cookie used to associate a sensitive request with an anti-CSRF token and reject illegitimate requests.	Session or duration configured by the application.
sessionid	Technical cookie used by the server to maintain the user's application session.	Session or duration configured by the application.
_oauth2_proxy_0 / _oauth2_proxy_1	Encrypted technical cookies of the OAuth2 proxy. They maintain authentication and authorization after login via Google or Microsoft.	7 days, unless otherwise configured.
__Secure-BUCKET	Google security cookie, used via HTTPS connection for Google login or embedded Google services.	Up to 6 months, according to Google settings.
__Secure-ENID / __Secure-YENID	Google security and personalization cookies, associated with Google services.	Up to 13 months, according to Google settings.
AEC	Google cookies for security and prevention of spam, fraud and abuse.	6 months.
SOCS	Google cookies to store cookie preferences.	13 months.
Cookie Microsoft Identity Platform	Microsoft cookies for authentication, security and session continuity when using Microsoft Identity Provider.	Determined by Microsoft and access options.

Third-party services

During the verification of the applications, the following external services were observed:

- Microsoft Identity Platform and Google Identity Provider, for authentication and access security.
- Google Fonts, for loading web fonts in applications.
- Google Maps, used in the Floodcat application.
- OpenStreetMap, used for map tiles in the Webalert application.

The providers' privacy notices are available on their respective institutional websites: Google, Microsoft and OpenStreetMap Foundation.

Managing and disabling cookies and similar technologies

By default, browsers automatically accept many cookies. Users can delete or block cookies, localStorage and sessionStorage through the browser settings, or limit them to specific websites.

Disabling or deleting them may log the user out, remove preferences and prevent some applications from operating correctly. Blocking technical cookies or cookies required by Identity Providers may prevent access to the portal.

For cookie management, please consult the instructions for the main browsers:
